

NEMESIS STAKEHOLDER WORKSHOP

METABOLIC DISRUPTORS

Bridging science to policy

14 OCT 2026 | 9:30 - 12:30 CEST

Join us for a stakeholder workshop hosted by the NEMESIS project, bringing together researchers, policymakers and other stakeholders to discuss how metabolism-disrupting chemicals (MDCs) affect human health. The workshop will focus on the latest research results and how emerging knowledge can better inform practical decision-making and policy.

The event will include short presentations alongside open discussion, giving participants with an opportunity to exchange perspectives and reflect on how scientific knowledge can be translated into real-world action.

- ✓ Gain insights into MDC-related health effects.
- ✓ Learn about new tools and approaches being developed in the field.
- ✓ Discuss directly with experts and stakeholders from different sectors.
- ✓ Share your perspectives and help shape future research directions and chemical policy

9:30 Welcome and introduction

9:35 NEMESIS Science Highlights

Highlights of ongoing NEMESIS research on the effects of MDCs on liver, pancreas and the gut microbiome

10:35 Open Q&A and discussion

10:50 *Break*

11:00 NEMESIS Translational Highlights

Introduction to key NEMESIS approaches and outputs, including biomarkers of exposure and effect, new approach methodologies (NAMs) and citizen perspectives

11:45 Keynote perspective

Professor David Dorman, North Carolina State University

12:00 Open Q&A and discussion

12:25 Concluding remarks

12:30 *End of the event*
